

HELP US EMPOWER YOUTH TO SAY NO TO VAPING

We are seeking parents and their child (12-15 years) to help us test if a text message program sent to parents and youth is an effective approach to preventing youth vaping

THE UNIVERSITY OF
NEWCASTLE
AUSTRALIA

Research shows that vaping can result in **lung injury, poisoning, burns and toxicity**

Nicotine (found in a high % of vapes) poses a risk to youth brain development, learning and mood regulation
